Summary

Design engineer and product builder with 13 years of experience taking AI agents and web products from concept to production. Built Agent Keyboard, an open-source coding agent, and took Closeout Copilot from first code to a \$40K enterprise contract with an immutable six-state audit trail. Combines interaction design for human-in-the-loop systems with full-stack prototyping in React and Python.

Experience

Founder, Designer and Engineer | Agent Keyboard (agentkeyboard.com)

Jun 2026 - Present

New York, NY

- Built an open-source coding agent that helps founders, designers, and small teams change and ship their own products through natural-language prompts, without leaving the running application.
- Designed and built the floating prompt widget, agent harness, and browser-based workflow that clones repositories, edits code, tests live products, commits changes, and redeploys.
- Designed an in-situ, iterative workflow where users ask for a change, watch it ship in the live product, and steer the next change through progressive access to sessions, screenshots, shell controls, and planning.

Lead Product Manager, AI | HyperTrack

Jul 2022 - Present

New York, NY

- Took Closeout Copilot from idea to HyperTrack's first enterprise contract by writing the first code and designing the human-review experience for an AI payroll and billing reconciliation agent.
- Designed the interaction model for trust in an autonomous agent (what it shows, when it asks for input, and how a person reviews, steers, and overrides its work), cutting discrepancy detection from two working days to one hour, clawbacks from 5% to 1%, disputes from 10% to 3%, and worker churn from 15% to 11%.
- Built production agent workflows primarily on Claude, alongside OpenAI, FastAPI, and React, including a custom compiler that turns natural-language payroll rules into deterministic code, an immutable six-state audit trail, and an in-house eval system.
- Built self-optimizing prompt experiments: every week the agent A/B/C/D/E tests its own copy across user cohorts and promotes the variants that lift meal-break funnel completion.
- Led a team of five across product, design, and engineering to ship Closeout Copilot, landing a \$40K first contract and moving HyperTrack from location tracking to automating the same customers' entire middle office with AI, a far larger share of their spend.

Venture Partner | Iterative

Mar 2020 - Present

Singapore / Remote

- Source and evaluate early-stage startups across Southeast Asia; have introduced five founders to the firm, with more reaching out regularly.

Co-founder & CEO | Outside Voice

Jan 2019 - Jun 2022

Singapore, New York

- Raised \$500K, hired a team of five, and scaled the business to \$1M ARR across 35 enterprise clients in 12 countries before exiting to HyperTrack.
- Designed and shipped a post-purchase customer-review product that operated natively inside WhatsApp conversations.
- Led the customer discovery that moved our WhatsApp photo-and-video review bot from project-based survey work to large e-commerce retailers, tying revenue to every transaction, and ran enterprise sales, pricing, and international expansion.

Earlier Experience

Co-founder & CEO | Crypto Squad

Mar 2018 - Jan 2019

Singapore

- Built a pooled crypto-investing product for friends and family; raised a small seed and wound down after a year without product-market fit.

Head of Design | HyperTrack

Jun 2017 - Feb 2018

New Delhi

- Joined after the \$6M seed round, hired the design team, and built the design system the company still uses.

Co-founder | Liss

Oct 2015 - May 2017

New Delhi

- Designed, coded, and shipped a bootstrapped iOS music-sharing application.
- Earned coverage in TechCrunch, The New York Times, and Wired.

Design Team Lead, Creative Labs | Housing.com

Jun 2015 - Aug 2016

New Delhi

- Started Creative Labs after Housing.com's \$100M financing round and built Pipal, a neighborhood social network, from scratch with a team of three engineers.

Senior Designer | Paytm

Jun 2013 - May 2015

New Delhi

- Designed Paytm's flagship consumer iOS app and recruited its first in-house iOS engineering team, working directly with the CEO.

Education

iOS Development Immersive

Jan 2017 - Apr 2017

General Assembly, San Francisco

BFA, Product Design

Sep 2008 - May 2012

Academy of Art University, San Francisco

Skills

Design

Interaction design, AI-agent interaction models, human-in-the-loop systems, product strategy, user research, design systems, prototyping, Figma

Engineering

Full-stack prototyping, React, JavaScript, Python, FastAPI, Swift, iOS, Supabase, PostgreSQL, REST APIs, Git

AI and developer tools

Claude, Claude Code, OpenAI, Codex, MCP, PostHog, browser automation, agent harnesses
